- **Group Discussion:** No GD was conducted

## Interview Details:

- **HR Interview:** Questions asked were resume based, case studies and guesstimates
- **Technical Interview:** Questions asked were resume based, case studies and guesstimates

## JOB DETAILS:

- **Describe a typical day in this role.**  
Part of the data science team obtains diverse data sources, principally examining unstructured data and transforming it into a structured format.
- **Expectations vs reality. Growth in 1-2 years.**  
The expectation was solely programming-related, but it was both a managerial and programming role in reality. Acquired an in-depth understanding of SAAS and Big data analytics by working on a lot of real-time projects.
- **What kind of projects were given?**  
The most satisfying part of the Axis was only a small portion of training, and more emphasis was given to projects. For example, tasks like Database creation of bank was given.
- **The work culture, employee benefits, etc., about the company.**  
It is more of a strict work schedule in the bank, and sometimes we also work at the weekends. Presently we work from home; it is good, work-life balance is there, but sometimes it can go up and down. The colleagues are also helpful. There was also less training, and more emphasis was on working on real-time projects.
